INCREASE TRAINING THROUGHPUT
WITHOUT ADDITIONAL TRAINERS

INCREASE TRAINING EFFECTIVENESS

SIMPLIFY ADMINISTRATION, REPORTING
& ANALYSIS

As an integral part of Immersive Technologies' Complete and Scalable Solution the Trainer Productivity Station ensures operator throughput is maximized and simulation assets are used to maximum efficiency.

With the growing shortage of experienced trainers within the mining industry, the Trainer Productivity Station, provides a tool to overcome this limitation by allowing a single trainer to supervise multiple trainees simultaneously from a single location enabling efficient use of scarce trainers.

TRAINER PRODUCTIVITY STATION

Maximize Operator Trainee Throughput and Efficiency

What is Trainer Productivity Station?

Trainer Productivity Station is a centralized workstation that can connect up to five Advanced Equipment Simulators. This allows a single trainer to manage up to five simulation training sessions simultaneously.

Trainer Productivity Station Benefits:

Increase Training Throughput Without Additional Trainers

A key bottleneck for any simulator based training program is the availability of experienced trainers. Removing this bottleneck increases the utilization of and value extracted from your Advanced Equipment Simulator assets.

Increase Training Effectiveness

By freeing up trainer time, more focus can be allocated to value adding activities such as mentoring, coaching and Instructor Led Training, as part of comprehensive training and business improvement program.

Simplify Administration, Reporting and Analysis

Centralize common tasks such as trainee administration, reporting, data analysis and scenario editing for all of your Advanced Equipment Simulators at one workstation using an intuitive interface.

Trainer Productivity Station

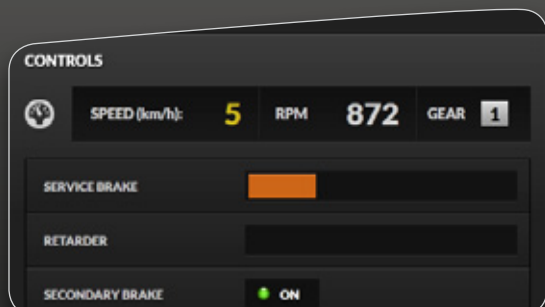

Utilizing two-way audio communication and a rich data feed of operator performance data, a trainer can interact with multiple trainees simultaneously. This is complimented by an intuitive user interface, a variety of training scenarios and access to extensive reporting, administrative and training management tools.

 and analysis functionality.

Blended Learning Model

Through our holistic approach to equipment operator development, Immersive Technologies provides our customers with a training model that ensures high levels of staff readiness and operational improvement, while taking advantage of a range of technologies to ensure the most cost effective solution. We do this through blending eLearning, Instructor Led Training, Medium and High Fidelity Simulators within a curriculum to meet your specific needs.

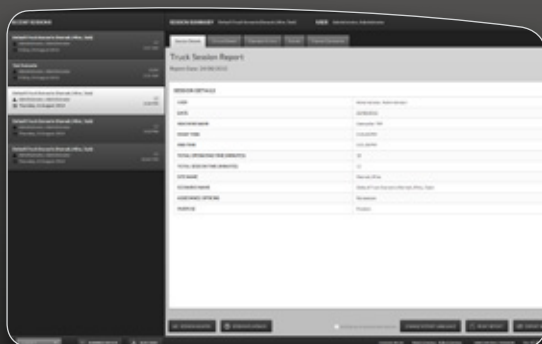

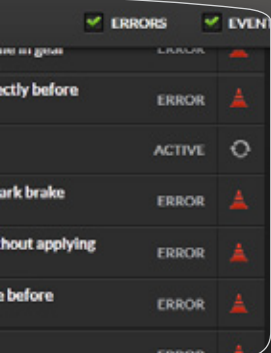

This ensures the lowest cost training tool is applied at all times without compromising learning or assessment outcomes.
