

- NEW UNDERGROUND ERRORS & EVENTS
- DOZER ENHANCEMENTS
- NEW TRAINER TOOLS

Dozer Enhancements

- Train dozer operators to correctly spot trucks at a dump location. Live trucks spot and dump based on the position of the dozer blade.
- A new error warns operators if they are dozing too deep and compromising safety.

New Errors and Events for Underground Machines

- Long Hole Production Drill Rigs: Train operators to respond correctly to a hose spray event.
- Trucks: Track whether operators are raising their tray while the truck is articulated.
- Underground Loaders: Test an operator's response to tire smoke. Assess operators respond correctly when a light vehicle enters their work area.

New Trainer Tools

- Add descriptions to scenarios in SimControl to help with organising a training program.
- Create bookmarks in 3D session playbacks to record key points for review in the future.
